

Floating Disc

0

5 turns +1/level

Creates an invisible, circular plane of force, 3' in diameter and 1" deep at its center, for carrying loads. It can hold a maximum of 500 pounds of weight. The disc must be loaded so that the items placed upon it are properly supported, or they will fall off.

The disc floats level to the ground, at about the height of the caster's waist. It remains still when within 10' of the caster, and follows at the caster's movement rate if he or she moves away from it.
